

# Winter is Coming!

## HOW TO “WINTERIZE” YOUR GARDEN AND GET IT READY FOR AMAZING SPRING PLANTING

### JUST ② PLANT-TASTIC STEPS!

After the first freezes hit and you’re cleaning up your garden, be sure to:

#### ① BOOST

**BOOST** your soil with a 1/4-inch layer of our beyond-organic compost.

Boost pre-conditions your soil with the tasty, wholesome nutrients that hungry young spring plants will crave!

#### ② PROTECT

**PROTECT** those nutrients with a nice, cozy 1-inch blanket of our superpowered, biomassive mulch.

Protect soaks up moisture & keeps your soil insulated.

When spring arrives, kick off that blanket and BOOM! Your soil is ALREADY happy, alive and ready for planting. Serious growers can add a little spring dose of BOOST and simply reuse the PROTECT layer all spring and summer long!

Full Circle gets you on track to the largest yields possible. In your garden, raised bed, planter boxes, large-scale landscape... and in pretty much any other place you want to grow nice, green and lush!

Because who wants to grow little crops? NOBODY!
