

# Planting Trees & Shrubs with Full Circle is a Breeze!

Using Full Circle's **BOOST** and mulch is the key to growing healthy trees and shrubs in our climate. Just follow these 4 steps:

1.

## DIG A HOLE

Simply dig your hole and mix 10% **BOOST** with native ground soil to go back in the hole, then lower in your tree or shrub (*we recommend putting the root side into the ground, as they don't grow so great upside down!*)

2.

## PLANT RIGHT-SIDE UP

Don't plant too deep! Keep the plant's "root flare" above the soil surface.

3.

## SPREAD BOOST

Spread 1/4" **BOOST** on the soil surface after planting. We recommend a 2-to-6 foot ring for nutrition to soak in from the top down.

4.

## SPREAD PROTECT

Spread 2" of **PROTECT** (*or Tahoe Composted Mulch*) over the ring of **BOOST** to maximize water-retention.

Full Circle's **BOOST** and mulch can be purchased from a network of distributors in bags or bulk. We can also deliver direct in bulk. Just shoot us an email or call.
